

Passenger Cabin Section

Passenger jetliner quarter fuselage section resembles any narrow body jet liner. The quarter fuselage is mounted onto a frame with casters for ease of movement on stage.

There are four rows with three seats (bottoms) per row (12 total). Seat rows can be removed or adjusted for spacing. The seats are leather in two shades of brown with monitors (monitors are non-operational, iPads can be used, static removable vinyl or green screen). The carpet and rear bulkhead wall is a complimentary shade of gray and blue. Sidewall, passenger units and non-smoking /seatbelt signs are operational. Sidewall lighting is Litegear Chroma RGB-Daylight (Sidewall trim lighting can be controlled by phoenix connector), all other lighting is standard airline incandescent.

Dimensions L: 143in W: 87in H: 103in

Weight: 2,000lbs
